

Types of Outdoor Succulents

in this article we are going to talk about succulents that can easily thrive in outdoor situations.

Another Types of outdoor succulents, Echeveria is easy to grow out doors, doesnt matter if you put them in container or pot it will be good either way. cause of its wonderful varieties and colors provides amazing mixtures in yard.

One can say Sedum is one of the tough succulents that you can find, its ability to withstand cold, windy and drought conditions is amazing and makes it a popular choice for succulents that you want to keep outside. These types of outdoor succulents are very nice.

Sedum is easy to take care of and a hardy plant that you can grow outside. Sedum divides into two main categories: creeping sedum and upright sedum. Creeping sedum spreads on the ground, not

growing so much only few inches, on the other hand upright sedum produces a tight .mass of tiny flowers

Agave is one of the beautiful and magnificent succulents that you can see they can either grow in pot or outside in the sand but if you want to put them outside have in mind that they like rocky and sandy soil, and keep them in full sun to partial shade.

Haworthia is not that kind of hardy plant cause they need sheltered spot but it also needs sun too so hear you should be very careful to not let them get sunburned. for best results it can live in rocky or sandy, dry and well drained soil.

Another Types of outdoor succulents, Aeonium is a hardy one it needs well drained soil and full sun, because of their shallow root system you do not need to always water it but you should be careful that, you dont allow their roots to dry out.

Senecio has so many varieties, about 100 types. as most of the succulents Senecio`s love sandy well drained soil and loves full sun. this succulent is heat tolerant but some of its species can withstand berif periods of cold.

Dudleya is also called "to live forever" so as it name`s says how much hardy this succulent is, its reported that this succulent lives form 50 to 100 years which is amazing. Dudleya has two types called branching and unbranching and are ideal for planting outside in rock gardens.

another Types of outdoor succulents, Graptopetalums are sun lovers they love to be in full sun and if they dont receive the amount of light or sun they want they will become leggy and their leaves will drop. they love hot water but not humidity with poorly draining soil.
